Retrospective

What did we do well?

- We managed to get a minimum viable product out
- Implemented features such as scrollable result, viewing medication info and disabling captcha in dev environment
- Got CI and automated deployment working

What should we have done better?

- We are very close to the submission deadline, perhaps we should have scaled back the feature implementations
- Need more unit tests
- Consider doing documentation in parallel (adding sprint tickets for this task)
- Some of the checkins in github do not have associated JIRA tickets
